

# SAFETY FIRST

**Crystaplex®** leads the dasherboard industry in its promotion of several innovative features created to maximize the enjoyment and safety of the great game of hockey for players, coaches and facility operators.

**SoftCap®** is the only safety cap rail system approved by the NHL, and is now used in nearly half of all NHL arenas. SoftCap® provides 96% more shock attenuation than standard HDPE cap rail, and is now approved and being used in school and community rinks throughout North America, making hockey boards safer for athletes of all skill levels.

**GlassFlex®** is our patented seamless shielding system, which uses shock-absorbing buffers attached to the channel in which the shielding rests, to help dampen player impact and thereby reduce the likelihood and potential severity of player injury due to impact with the boards and shielding.

**PowerPlate™** is a specialized lamination applied to the spectator side of hockey glass which makes the glass less likely to break, and in the event it does break, keeps broken glass in place until it can be safely removed by the rink operators, improving safety for players and fans, while reducing risk and liability for facility owners.

**Safety Through Innovation** has been the culture at Athletica Sport Systems for years. We urge you to compare our leading edge safety innovations to anything offered by any other dasherboard company in the world.

Innovations on Ice since 1956
